Milkweed Seeds

THE HOSTPLANT FOR MONARCH BUTTERFLIES

Asclepias syriaca

Directions: Milkweed needs **Cold Stratification** in order to germinate properly. Place seeds in a damp (not wet!) paper towel inside a plastic bag and leave for 3 to 6 weeks. Check for mold or dryness. When ready to plant, loosen the soil in your planting area and moisten a little with water. Scatter your seeds and then cover with 1/4 inch soil. Lightly water again. Seeds germinate in 7-10 days.
