

New Mexico Butterfly Monitoring Network

Started by the New Mexico BioPark Society in 2020, The New Mexico Butterfly Monitoring Network aims to contribute to the scientific knowledge of New Mexico's butterfly fauna. Through this initiative, the BioPark Society will continue to fulfill its commitment to conservation, education, and the community. The standardized long-term data collected by citizen science volunteers, will be useful to researchers, land managers, and conservationists to evaluate trends in butterfly populations. Shedding light on the health and resiliency of butterfly populations in the state will enable us to better protect and preserve precious resources.

Snapshot

Coordinator: Walker, Anna

Program Started: 2020

Institutional Affiliation: New Mexico BioPark Society 

Institution Type: Zoo

Species Focus: All butterfly species

New Mexico BioPark Society 

Contact: Anna Walker (redlistinverts@bioparksociety.org )
